FERTIUM AQUA

WATER SOLUBLE FERTILIZERS WITH MICRO-ELEMENTS AND FLOW PROPERTIES

Fertium Aqua is a range of balanced and complete **water soluble NPK fertilizers, enriched with microelements** of maximum solubility in all types of water.

Various NPK **balances adapted to each stage of plant growth**. The formulation has negligible amount of chlorine and sodium (harmful elements for some crops). It **minimally changes the conductivity** of the irrigation water after the application of the fertilizer.

Flow Technology prevents the formation of harmful salts and toxicity, keeping the pH of the mother solution slightly acidic. These properties are essential for a good management of fertigation, avoiding retrogradation and precipitation of certain elements.

	N	P ₂ O ₅	K ₂ O	B	Mn	Mo	Zn

Recommended doses	Fertigation
Stock solution	10-20 Kg / 100 L water
Nutritive solution	0.2-0.5 gr/L

Packaging

10Kg, 25Kg, 600Kg
